Anxiety is characterized by apprehension or fear of impending actual or imagined danger, vulnerability, or uncertainty and may be accompanied by restlessness, tension, tachycardia, and dyspnea unattached to a clearly identifiable stimulus. (ICD 9 code 300.0)

Depression is an unpleasant, but not necessarily irrational or pathological, mood state characterized by sadness, despair, or discouragement; it may also involve low self-esteem, social withdrawal, and somatic symptoms such as eating and sleep disturbance. (ICD 9 code 311.0)

Oral Manifestations and Considerations

Oral
- Neglect of oral hygiene leading to increased risk of dental caries and periodontal disease
- Poor nutrition
- Drug-induced xerostomia
- Some studies report a positive correlation with temporomandibular disorders and atypical facial pain.

Other Potential Disorders/Concerns
- Mitral valve prolapse and GERD
- Children with depression are at increased risk for engaging in high-risk behaviors (promiscuity, smoking, alcohol and drug abuse)

Oral Side Effects of Commonly Prescribed Medications

Parent/Caregiver Support and Guidance

- Discourage consumption of cariogenic foods and beverages.
- Prescribe sugar-free medications, if available.
- Recommend preventive measures such as topical fluoride and sealants.
- Advise the use of fluoridated toothpaste twice daily and support the family in following dental care instructions.
- Instruct caregiver on appropriate protocol following dental trauma (locate/preserve missing tooth and put in cold milk; seek immediate professional care).
- Review safety issues appropriate to the age of the child, such as mouth guards to prevent oral-facial trauma.
- Recommend rinsing with water thoroughly after taking each dose of sugar containing medication and frequent water intake for children taking xerostomic medications.
- Recommend preventive measures, such as topical fluoride and sealants.
- Refer to dentist any oral developmental abnormalities.
